

Operating window measured on the EXTRACTED cell, lpf_core
same corner sets and bench definitions as before layout

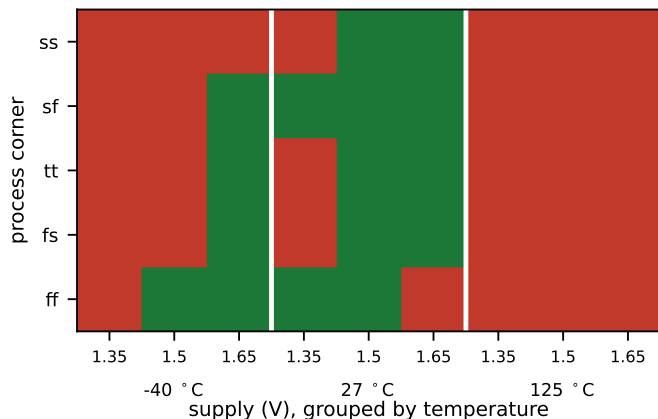

(a) one corner axis at a time — green = every spec line passes, red = at least one fails

(b) before layout (schematic) — 16 of 45 pass

(c) after layout, round 4 (it14) — 16 of 45 pass

(d) corner coverage — the extraction changes no verdict on any of the 45 corners

corner set	before layout	after layout	change	run time
one axis at a time (9)	6 / 9	6 / 9	+0	1 s / 2 s
reduced screen (22)	6 / 22	6 / 22	+0	1 s / 2 s
full grid (45)	16 / 45	16 / 45	+0	2 s / 4 s
