

The layout iteration trail, cell lpf_core — 14 snapshotted build rounds, written by the designer agent itself

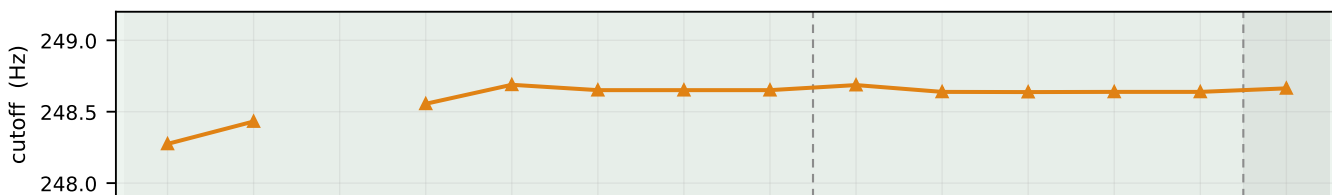

(a) area — the fix rounds cost area, the optimizer campaign gives it back

(b) phase max, measured on the extracted cell each round

(c) cutoff — never left the 245–255 Hz box (shaded band is the box)

(d) design-rule, layout-vs-schematic and extraction checks ran every round
